                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         요
                                                                                                                      The present sequence is that of a cDNA clone encoding a rat histamine receptor of the H4 subtype. The cDNA was isolated from a rat spleen cDNA library. It shows 72.5$ homology to the human H4 receptor coding region. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAI70980-83) and colypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the mammalian histamine H4 receptor. Such modulators may be useful for identifying consultations of the mammalian histamine H4 receptor. Such modulators may be useful for diagnossing, treating or preventing asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent diabetes mellitus, hyperslycemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity

The present sequence is that of a cDNA clone encoding a murine histamine receptor of the H4 subtype. The cDNA was isolated from a mouse spleen cond ilbrary. It shows 72.8 homology to the human H4 receptor coding region. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the mammalian histamine H4 receptor. Such modulators may be used in gene therapy for diseases may be used in gene therapy for intention activity. Recombinant protein is useful for identifying modulators of the mammalian histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia, clienticity

The invention relates to human and mouse g protein-coupled receptors (GPCRs) and nucleic acids encoding them. The invention also relates to sequences at least 90% identical to the GPCR proteins and nucleic acids of the invention; methods of treating, proteins and nucleic acids of the invention; methods of seases, at ransgenic compounds useful in the treatment of GPCR-related diseases, at ransgenic mouse comprising a GPCR gene of the invention; a mouse comprising a transgenic mutation in a GPCR transgene or in an endogenous GPCR gene; cells derived from the trassgene or in an endogenous GPCR gene; cells derived from the trassgenic of the invention; a mouse comprising a mutation in a different GPCR gene of the invention; and kits comprising a mutation in a different GPCR gene of the invention; and kits comprising a mutation in a different GPCR gene of the invention. The comprising a GPCR nucleic acid. The GPCR polymother of the invention. The used in the disgloses variants of the GPCR polypeptides and vectors comprising a GPCR nucleic acid. The GPCR nucleic acids and proteins may be used in the disgloses, treatment or prevention of a wide variety of disseases including neurological disorders (e.g., Alzheimer's disease, (alseases including neurological disorders of the colon or intestine of syndrome); cardiovascular disorders (e.g., angina, cardiac arrhythmia or myocardial infarction); immune disorders (e.g., autoinmune disorders (e.g., antimune disorders (e.g., autoinmune disorders (e.g., antimune disorders (e.g., antimune disorders (e.g., autoinmune disorders (e.g., antimune disorders (e.g., antimune disorders (e.g., autoinmune disorders (e.g., antimune disorders (e.g., antimune disorders (e.g., antimune disorders (e.g., autoinmune disorders) (e.g., autoinmune disorders) (e.g., autoinmune disorders) 
                                                                                                                                                                                                                                                                                                                                                                                                       Novel mammalian G protein coupled receptors, useful for identifying compounds that modulates diagnosing and treating disease condition associated with GPCR dysfunction e.g. autoimmune diseases, angina
                                                                                                                                                                                                                                                     Gaitanaris GA, Bergmann JB, Gragerov A, Hohmann J,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to splice variants of human H4 histamine receptor H4b and H4c. The invention is useful for identifying an agonist, antagonist or inverse agonist of a mammalian histamine receptor. The agonist, antagonist or inverse agonist of H4b and H4c is useful for treating inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial inflammation, migraine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, or psoriasis. The present sequence is human H4 receptor DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          BP; 292 A; 245 C; 231 G; 402 T; 0 U; 0 Other

                                                                                                                                                                                                                                                                                                                                                      90
    invention
  unknown (orphan GPCR receptors). More specifically the present inventior relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. AAA46017 to AAA46126 and AAB02825 to AAB02859 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                 AsnProGlySerGlylleCysMetPheTrpLeulleThrAspTyrLeuLeuCysThrAla

The present sequence is a cDNA encoding hRUP7, an endogenous human orphan G protein-coupled receptor (GPCR). The full length hRUP7 cDNA was cloned by RT-PCR using human peripheral leucocyte cDNA as template. The orphan GPCR of the invention, like all GPCRs has seven transmembrane alpha helices with an extracellular N-terminus and an intracellular C-terminus. However, no endogenous ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of their endogenous ligands, and to screen potential GPCR agonists and antagonists for use as pharmaceutical agents. The proteins may also be used in the study of GPCR-mediated signalling cascades, and to elucidate their precise role in normal and diseased human conditions. Nucleic acid encoding human orphan GPCRs may be used for tissue localisation expression analysis to provide information about their function in
                                                                                                                                                                                                                                                                  Novel human orphan G protein-coupled receptors and the encoding cDNAs for use in the identification of G protein-coupled receptor agonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 TTTATGTCCTTAGTAGCTTTTGCTATAATGCTAGGAAATGCTTTGGTCATTTTAGCTTTT 120

This cDNA of NCIMB 41073 encodes a human G-protein coupled receptor

(GPCR)-like polypeptide, designated PFI-013. The PFI-013 protein can be
expressed by standard recombinant methodology. Antibodies and modulators

of PFI-013 are useful in the manufacture of a medicament for treating

allergic disorder, including extrinsic asthma, immunological disorders,

and other pulmonary disease, including chronic obstructive pulmonary

disease (CPCPD), infectious, inflammatory disease, such as inflammatory

chasease (CPCPD), infectious, inflammatory disease, such as inflammatory

bowel disease and neoplastic and myeloproliferative diseases. They are

also useful for treating obesity, diabetes, metabolic, neurological

chiseases, psychotherapeutics, urogenital disease, reproduction and sexual

medicine, inflammation, cancer, tissue repair, dermatology, photoageing,

skin pjumentation, osteoprosels, cardiovascular, gastrointestinal

chiseases allergy and respiratory disease, sensory organ disorders, sleep

disorders and hair loss. The PFI-013 protein and nucleic acid are useful

chromial chasposis and treatment of the above conditions and also for

screening drug candidates for the treatment of diseases associated with

sugant transduction. The antibodies are also useful for enrichment of

consinous in the disposite of the above conditions and electing the

social and an enrichment of the conditions and also for

screening condidates for the treatment of diseases associated with

sugant transduction. The antibodies are also useful for enrichment of

conditions.
                                                                                                                                                                                                                                                                                                                                                                                       New G-protein coupled receptor-like polypeptide, polynucleotide for screening drug candidates for treating diseases associated with signal transduction e.g. allergic, inflammatory, pulmonary, neoplastic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 AspPhePheValGlyVallleSerIleProLeuTyrIleProHisThrLeuPheAsnTrp

The invention relates to the human G protein-coupled receptor AXOR35 (AAB73621), to cDNA encoding AXOR35 (AAB24006), and to AXOR35 fragments and variants. Like all G protein-coupled receptors, AXOR35 has transmembrane domains and is involved in signal transduction. AXOR35 has homology and structural similarity with G protein-coupled receptors such as the human histamine H3 receptor. The invention also relates to expression vectors and host cells comprising AXOR35 DNA, to recombinant expression of AXOR35, and to an AXOR35-specific antibody. AXOR35 proteins and nucleotides may be used to treat a wide variety of disorders including bacterial, fungal, protozoal and viral infections, particularly HIV-1 or HIV-2 infections; pain; cancers; benign prostatic hypertrophy; diabetes; obesity; anorexia; bulimia; osteoporosis; asthma; allergies; urinary retention; acute heart failure; hyperension; hypertension; angina urinary retention; acute heart failure; hyperension; hypertension; angina pectoris; myocardial infarction; stroke; ulcers; migraine; vomiting; psychotic and neurological disorders such as anxiety, schizophrenia, manic depression, depression, delirium, dementia, and severe mental retardation, depression, debression, debritum, dementia, and severe mental retardation, and dyskinesias, such as Parkinson's disease, Huntington's disease or Gilles de la Tourette's syndrome. AXOR35 proteins and nucleotides are useful as vaccines, and AXOR35 proteins, nucleotides and antibodies may be used in screening compounds for their ability to modulate AXOR35 activity or expression. Such AXOR35 modulators are particularly useful for treating asthma, and inhibiting or promoting the function of lymphocytes, macrophages, eosinophils or neutrophils in asthmatic lung. AXOR35 proteins, nucleotides and antibodies are also useful for diagnosing or determining susceptibility of an individual to a disease via the detection of abnormal levels of protein or mRNA, or via 

Human G protein-coupled receptor AXOR35 cDNA.

                           This sequence represents the open reading frame for a human histamine receptor (HR) designated SP914. The sequence was isolated by searching databases with the sequence of known G-coupled protein receptor (GCPR). The gene is used for recombinant production of HR and for preparing antibodies (Ab). These Ab are used to purify HR by immunoaffinity clones that express the receptor, as antagonist to block binding of histamine for treating any histamine-associated disorder) and to generate anti-idiotypic antibodies. Agonists and antagonists of the HR protein can be used in the treatment of e.g. inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infarction, migraine, chronic obstructive pulmonary disease, rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel mammalian histamine receptor polypeptide useful for identifying agonist or antagonist for treating diseases such as inflammation, asthma, stroke, migraine, rheumatoid arthritis, multiple sclerosis, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                The present sequence encodes a human histamine receptor. The polypeptide is useful for identifying an agonist or antagonist of a mammalian histamine receptor. It is useful as an antigen to elicit the production of antibodies. The histamine receptor polypeptide and polymucleotide are useful in the treatment and management of diseases such as inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infection, arthritis, multiple sciencists, pulmonary disease (COPD), rheumation, arthritis, multiple sciences, inflammatory bowel disease and psoriasis. They are also useful for modulating intracellular second messenger pathway activated through histamine receptors (cyclic-AMP, calcium, inositol phosphate and mitogen activated protein (MAP) kinase), changes in callular growth rate, secretion of hormones, receptor-stimulated Ca2+
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ઠ
                                                                                                        New mammalian histamine H4 receptor proteins and polynucleotides encoding the proteins, useful in gene therapy for treating diseases where it is beneficial to elevate mammalian histamine H4 receptor activity.
                                                                                                                                                                                                                                    histamine receptor of the H4 subtype. The cDNA was isolated from a bone marrow CDNA library. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AANT080-83) and polypeptides (see AAMS0564-67). The nucleic acids have been expressed in recombinant host calls that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Nammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the human histamine H4 receptor Such modulators may be useful for diagnosing, treating or preventing asthma,

The invention provides an isolated histamine receptor, H4, which binds ligands comprising imidazole attached to amine by an alkyl chain. The H4 receptor can be expressed by standard recombinant methodology. Cells expressing H4 receptor protein at a detectable level can suppress cyclic adenosine monophosphate (cAMP) formation when contacted with the H4 receptor agonist. The H4 receptor and antibodies are used for identifying H4 receptor adoulators. Modulation of histamine H4 receptors is useful for treating transplanted organ rejection, asthma, allergies and autoimmune pathologies such as multiple sclerosis, type I diabetes, rheumatoid arthritis, cognitive and memory defects. The H4 receptor protein and nucleic acids are useful targets to identify drugs that are effective in treating disorders associated with histamine-regulated processes. Identification and isolation of H4 receptor provides for development of screening of modecules that interact with H4 receptors. Genetic variants of H4 can be used to disquase an H4 associated of sease as described above. The H4 receptor polymucleotide is useful to treat or provent a disorder associated with the function of H4 in peripheral blood is and an analyses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 TITATGICCTIAGTAGCTTTTGCTATAATGCTAGGAAATGCTTTGGTCATTTTAGCTTTT 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a human G protein-coupled receptor (GPCR)
appearing as ABU92259-ABU92277 (encoded by CDNAs ACA93256-ACA93274) named
hARE-3, hARE-4, hARE-5, HRUP3, hRUP5, hRUP7, hGPCRZ7, hARE-1, hARE
-2, hPPR1, hC2A, hCTN3, hCHN4, hCHN6, hCHN9, hCHN10 and hRUF4.

Also included are a plasmid comprising a vector and one of the CDNAs
above and a host call comprising the plasmid. The GPCRS are useful for
the direct identification of candidate compounds as inverse agonists,
agonists or partial agonists. In vitro and in vivo systems incorporating
CPCRs is useful for elucidating and understanding the roles these
receptors play in the human condition, both normal and diseased, as well
as understanding the role of constitutive activation as it applies to
understanding the signalling cascade. The CDNAs are useful for making a
probe for dot-blot analysis against tissue mRNA and/or RT-CR
identification of the expression of the receptor in tissue samples. The
present sequence is a cDNA encoding a GPCR of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

The invention is useful for making a probe for dot-blot analysis and for XT-PCR identification of the expression of the receptor in tissue samples. The invention is also useful for identifying candidate compounds as inverse agonists, agonists to partial agonists and as research tools in determining the location of the receptors within the body. The present sequence is human orphan G protein-coupled receptor cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New cDNA encoding a human G protein coupled receptor, useful for making probe for dot-blot analysis against tissue-mRNA, and/or for RT-PCR identification of the expression of the receptor in tissue samples.

cc expression vector, producing a recombinant host cell by introducing the vector into a cell such that the host cell produces AXOR35, a membrane of the host cell expressing AXOR35, identifying/screening for agonists or antagonists or antagonists or antagonists or by administering to the patient AXOR35 agonists or antagonists. The agonist or antagonist in diseased tissue, by administering to the patient AXOR35 agonists or antagonists. The agonist or for inhibiting or promoting the function of lymphocytes, as the acrophages, eosinophils, or neutrophils in diseased tissue such as an asthmatic lung. AXOR35 or polymuclectide is useful in diagnostic assays, for identifying compounds that are agonists or antagonists of AXOR35, as vaccines, or for treating infections (bacterial, fungal, protozoan or viral infections), transplant rejection, gastrointestinal disorders (such as gastric ulcer), inflammatory bowel diseases (such as rheumatoid arthritis, as gastric ulcer), inflammatory bowel diseases (such as rheumatoid arthritis, psoriasis), urological diseases (such as urinary retention), cardiovascular diseases (such as such as rheumatoid arthritis, disease), cough, renal diseases (such as renal ischemmia), cut alternation and diseases (such as recorders (such as majoraine, anoraxia, anxiety, setroke, septic shock, graft or arteriosclerosis, atherosclerosis, psychotic and neurological disease (such as majoraine), anoraxia, anxiety, setroke, septic shock, graft or arteriosclerosis, atherosclerosis, psychotic and neurological disease and osteoporosis. The present sequence is the cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180

```

Database

is the number of results predicted by chance to have a Pred. No.

_6/ptodata/2/pubpna/US11_NEW_PUB.seq. _6/ptodata/2/pubpna/US60_NEW_PUB.seq. 6/ptodata/2/pubpna/US60_PUBCOMB.seq

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
